DESIGN | FABRICATION | SUPPLY | INSTALLATION | AUTOMATION

We attribute our success to our team's collective expertise and their commitment to excellence

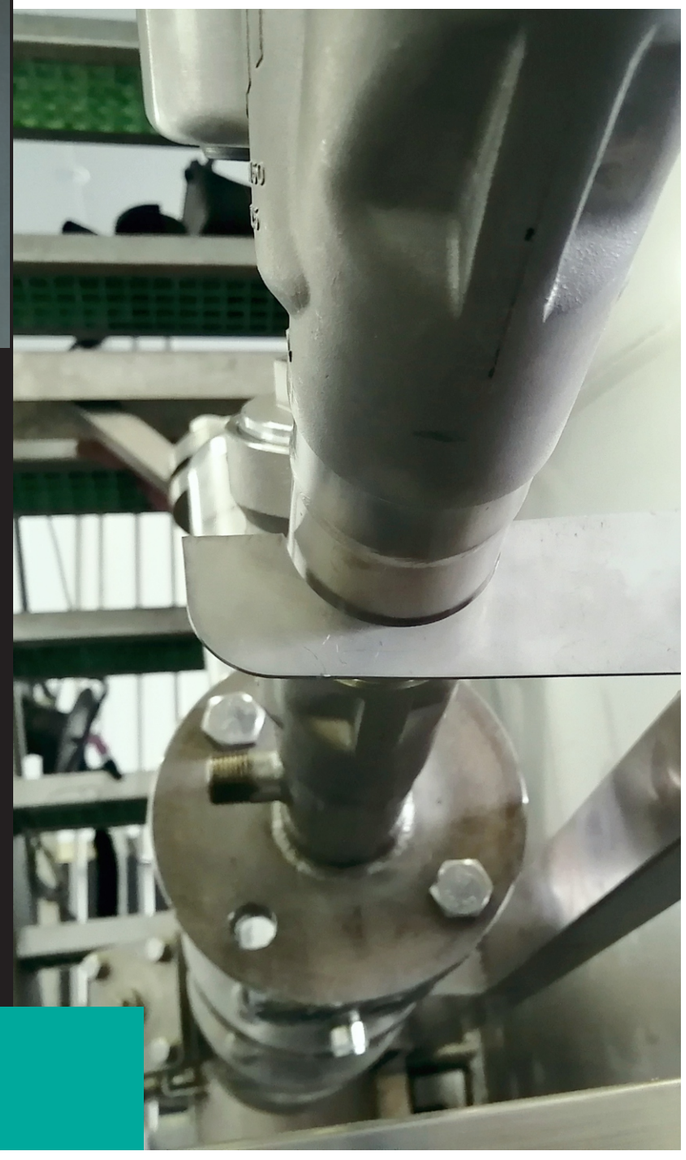

Our teams are accustomed to working within highly-regulated production environments and are respectful of the highest safety and hygienic standards. We ensure that our work stands up to the most rigorous test results and meet SANS and the required international quality standards. Our versatile team remains abreast of the latest process engineering and technology requirements, which in turn ensures continuous improvement in our design, fabrication and installation processes.

MetaGroup is a Cape Town based group of companies delivering process engineering solutions to a wide range of process industries.

The business was established in 2015 operating primarily as a process design and equipment manufacturing operation. We have since expanded to becoming a specialist welding and fabrication provider, broadening our offering to include a versatile range of services. We have structured our operations into three divisions, MetaPro, MetaPipe and MetaNox, which gives us the flexibility to effectively respond to specific customer requirements.

We pride ourselves in our strong customer relationships and spare no effort in ensuring that each project is an enjoyable, value-adding experience exceeding the customer's quality, cost and timeline expectations.

We attribute this success to our team's collective expertise and their commitment to excellence.

A flexible delivery structure

The MetaGroup provides innovative process solutions to a wide range of sectors.

Our highly qualified team of engineers, designers, technical personnel, draftsmen and project managers are experienced in all phases of project delivery and share an understanding of each customer's unique operational requirements.

We have enhanced our delivery offering by structuring our multi-disciplinary capabilities into three business entities.

MetaPro, MetaPipe and MetaNox each operate independently, and as a cohesive team harness specialist expertise, resources and economies of scale within the group, bringing you a turnkey service.

This gives us the flexibility to structure our offering to meet customers' specific operational needs; from project management, design, fabrication, installation, commissioning, refurbishment to maintenance.

PROJECT DESIGN AND VALUE-ENGINEERING WITH FOCUS ON OPTIMISED PROCESS SOLUTIONS

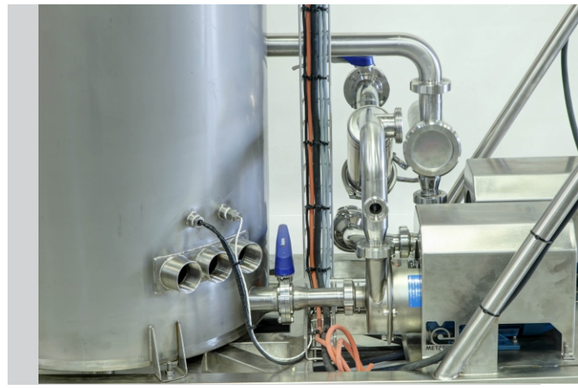

MetaPro offers a range of solutions, from bespoke design and manufacture of process equipment and skids to the practical implementation of projects run by other design houses. Our expertise in mechanical, chemical, electrical engineering and process engineering adds value to your business by providing value-adding engineering solutions form process engineering and layout design to equipment and equipment fabrication.

FABRICATION AND INSTALLATION OF PIPE WORK AND EQUIPMENT FOR PROCESS LINES

MetaPipe offers coded welding, fabrication and installation services of sterile, corrosion free and corrosion resistant piping systems and production equipment in the food, dairy, beverage and pharmaceutical industries. Our scope of works includes utility piping for steam, chilled water, potable water and compressed air lines, specialising in stainless steel, carbon steel and a range of PVC materials.

MAINTENANCE SOLUTIONS FOR YOUR EQUIPMENT

MetaNox assists in the maintenance and upkeep of the various equipment supplied by the MetaGroup. While we concentrate on the periodic preventative maintenance of our own equipment, we also assist our customers with the maintenance of other equipment on site. MetaNox also supplies the automation control panels fitted on the equipment produced by the MetaGroup as well as for customers' particular requests.

Our holistic approach to each project and striving to understand the specific requirements of the respective sectors we operate in, allows us to value-engineer your process requirements with a focus on optimising life-time cycle and mitigating cost and programme risk. We value long-term customer relationships and therefore offer post installation support and training.

Your **partner** in process solutions

We deliver a wide range of services, from turnkey solutions, singular projects to working with implementation companies to deliver on your industry specific processing requirements.

We cover coded welding, fabrication and installation services of sterile, corrosion free and corrosion resistant piping systems and production facilities for a wide range of sectors.

TRACEABILITY AND COMPLIANCE

We provide customers with projects requiring certified documentation with a comprehensive quality file containing all the relevant documentation pertaining to project compliance.
